Regarding Docket No. 2004P-0008/CP1; Title: Protection from Chlorinated
Dibenzo-p-dioxins and Chlorodibenzofurans; Entry Date: 1/7/04

Dear Sirs,

We would like your organisation to take a world lead in the labelling of animal fat foods to give some indication as to the likelihood or possibility of dioxin content. If you have reason to believe that such foods could contain dioxin, we believe that it would be irresponsible not to share this information with the consumer.

We ask that you do this for the sake of our relatives in the USA and also in the hope that it would raise awareness of the vital need to protect the food chain from persistent organic pollutants and to phase out processes that produce them in accordance with the Stockholm Agreement. We would like to see similar labelling in Europe.

Yours faithfully,

Rosie Cargin
